EXPERIENCE

Web Developer |Xivia soft

Dec 2024 – in progress, Pakistan

- Developing Websites: Built and updated websites using HTML, CSS, Bootstrap, and Typescript for various client projects, ensuring they function smoothly on all devices.
- Working with Others: Collaborated with designers and other developers to enhance website usability and user engagement significantly.
- Making Websites Faster: Improved website loading speeds substantially by optimizing performance andstreamlining content delivery.
- Adding New Features: Expanded website capabilities by integrating APIs and third-party services, enriching user interactions and service offerings.
- Testing and Fixing Websites: Conducted thorough testing and quality assurance, greatly reducing issues after launch and enhancing overall website stability.

Projects

AI-powered language learning

- Developed an AI-powered language learning platform with React.js (frontend), using MUI for UI and Context API for state management.
- Implemented role-based access control for admin content management and personalized learner experiences.
- Designed a responsive dashboard for seamless lesson access, progress tracking, and goal setting across devices.

Single Muslim

- Developed a Single Muslim platform with React.js (frontend) and Firebase (backend), integrating MUI for UI, React Hook Form for handling, and Yup for validation.
- Implemented role-based access control for admin management and user-restricted profile/match interactions.

Portfolio

- Developed a Portfolio Showcase using React.js (frontend) integrating MUI for modern UI and Framer Motion for animations.
- Built a dynamic project filter and a responsive showcase for projects, skills, and achievements.

Shipping And Sourcing

- Developed a Shipping & Sourcing platform using React.js (frontend) and Firebase (backend), integrating MUI for UI and React Hook Form with Yup for validation.
- Implemented role-based access control for secure order management and supplier interactions.

Chat App

- Developed a Chat App using React.js (frontend) and Appwrite (backend), integrating MUI for UI and React Hook Form with Yup for validation .
- Implemented real-time messaging, user authentication, and role-based access control for secure conversations.

EDUCATION

Bachelor in Computer Science | University Of Swat
